

Biondi S.r.l. - Efficientamento Energetico Immobiliare / “Progetto finanziato nel quadro del POR FESR Toscana 2014-2020”

The intervention that the company is undergoing concerns:

- Replacement of windows and fixtures:

This phase involves the partial replacement of some of the "roof" fixtures (dimensions 134 x 98 m) existing in the 3-floor chambers. The expected energy saving target with the measures envisaged at this stage is 0.1% of the annual Primary Energy consumed prior to the intervention itself.

- Replacement of air conditioning system, with system powered by high efficiency heat pump:

This phase involves the partial replacement of the existing facility for the Hall and Reception areas. The expected energy saving target with the measures envisaged at this stage is 9% of the annual Primary Energy consumed prior to the intervention itself.

- Intelligent automation and control systems for indoor lighting and air conditioning, using sensors of brightness, presence, movement, humidity, CO2 or pollutant sensors

- This stage involves the creation of an intelligent room management system, or the installation of a magnetic key transponder (badge) that is able to act as a presence sensor. The expected energy saving target with the measures envisaged at this stage is 7.5% of the annual Primary Energy consumed prior to the intervention itself.

Finally, we specify that the allowed investment is Euro 219.756,00 and the grant awarded is Euro 87.902,40
